

ScoreLink+ Device

The award-winning ScoreLink+ was created for the production company in mind or the school who wants to stream while on the road.

Designed for our on-the-go users traveling from venue to venue, the ScoreLink+ is our most flexible scoreboard interface device and often viewed as a swiss army knife because of all its capabilities. Traveling live sports production companies prefer this model due to the numerous built-in connection options, including the ability to switch between over 200+ scoreboard types in a matter of seconds.

The ScoreLink+ has a variety of functions including built-in WiFi, an LED status display panel, and as an optional add-on the ability to receive scoreboard data wirelessly from certain scoreboard types.
